

1 →

After years of intensive impacts small superficial damages may occur to the sanicoat surface. Collisions of various internal transportation causes scratches, stains and other collision marks. These can be removed effectively using the 'PolySto Cleaner'. The PolySto Cleaner can also be used for cleaning Food Safe Sealants after application.

2 →

Renew the gloss of the sanicoat surface with the 'PolySto Polish'.

3 →

If needed the joints can be renewed with Food Safe Sealant or a 2-component mass (Saniseal).

4 →

Repair your kerbs using our 'PolySto repairkit' (2 component gelcoat kit). All required application tools are included.

5 →

Use the PolySto extreme impact solution (selfadhesive PE strip mounted on the front of the kerb) for heavy impact protection.

6 →

PolySto kerbs can also be replaced very quickly by the prefabricated system (see PolySto installation instructions).
